

# Beaufield Intersect 3.92 g/t Gold Over 13.40 Metres Near Surface at the Launay Gold Project in Quebec

13.01.2014 | [Marketwire](#)

MONTREAL, QUEBEC--(Marketwire - Jan 13, 2014) - [Beaufield Resources Inc.](#) ("Beaufield" or the "Company") (TSX VENTURE:BFD) is providing results for the first eight holes drilled, totaling 939 metres, on its Launay Gold Project, located due northwest of Val d'Or, Quebec. Assay results for eight diamond drill holes, LAY-11-2013 to LAY-17-2013 and LAY-19-2013, were received and demonstrate the excellent continuity and grade of the gold mineralization along Zone 75. The drill program is funded by the Company per an option agreement signed with [Melkior Resources Inc.](#) in November 2013 (please refer to press release November 7<sup>th</sup> 2013.) Drilling is ongoing and results will be released when there are received.

Drill highlights include:

- 26.20 metres of 1.61 g/t gold in LAY-12-2013
- 9.00 metres of 4.62 g/t gold, including 6.00 metres of 6.50 g/t gold in LAY-14-2013
- 13.40 metres of 3.92 g/t gold, including 8.00 metres of 5.15 g/t gold in LAY-15-2013

Beaufield has drilled approximately 1,889 metres in 16 holes to date for its 2013 fall Launay program, with assays pending for additional 8 holes. A planned 400 metre, core length, hole is currently being drilled to test an Induced Polarization (IP) target and the potential deep extension of Zone 75. Gold mineralization in the area is often associated with IP anomalies due to the presence of pyrite.

**Table 1 - Zone 75 Intercepts**

Hole Number	End of hole length (Metres)	Azimuth (Degrees)	Dip (Degrees)	From (Metres)	To (Metres)	Interval* (Metres)	Gold (g/t)
LAY-11-2013	105	90	-50	---	---	---	NSA**
LAY-12-2013	105	90	-50	8.55	13.98	5.43	1.39
				22.30	48.50	26.20	1.61
including				35.00	38.75	3.75	2.31
including				40.35	44.25	3.90	3.00
including				43.00	48.50	5.50	2.00
LAY-13-2013	126	90	-50	56.05	57.00	0.95	6.52
LAY-14-2013	105	90	-50	39.00	48.00	9.00	4.62
including				42.00	48.00	6.00	6.50
including				42.00	44.00	2.00	14.10
				53.00	64.90	11.90	1.92
including				57.00	62.00	5.00	3.28
including				57.00	58.70	1.70	4.97
including				60.70	62.00	1.30	5.49
LAY-15-2013	129	60	-50	73.60	87.00	13.40	3.92
including				79.00	87.00	8.00	5.15
LAY-16-2013	162	30	-50	109.60	118.80	9.20	1.43
LAY-17-2013	117	90	-50	75.65	77.00	1.35	2.97
LAY-19-2013	90	125	-50	---	---	---	NSA **

\* Reported drill intercepts are not true widths.

\*\* NSA - no significant assays.

## Additional details about the Launay drilling program

The purpose of the program was to collect new data on Zone 75 in order to evaluate its gold mineralization

and its potential. The drilled portion of Zone 75 occurs over a strike length of at least 175 metres and outcrops over a large portion of this length due to overburden removal carried out in 1980's. Drilling from Melkior's 2012 exploration program revealed gold intersections including 4.94 g/t gold over 12.00 metres and 2.49 g/t gold over 18.40 metres (please refer to Melkior's press releases August 30<sup>th</sup>, 2012.)

Results from the 2013 drill program will be integrated into the three dimensional database. The drilling program also revealed that the gold mineralization is controlled by lithology (rock type) and can therefore easily be tracked from hole to hole. The gold-bearing lithology consists of white and black granite which is due to the presence of an albite alteration (white colour) and biotite (black colour). Locally this granite has a pinkish colour due to a weak hematite alteration. The thickness of this granite unit varies but is typically between 20 and 30 metres.

### ***Quality control***

Core processing included descriptive logging and systematic sampling for analysis. The drill core was sawn in half, with one-half delivered to a commercial laboratory and the other half retained for future reference. Samples were submitted to ALS Chemex Laboratories in Val d'Or, Quebec. The processed samples were subjected to a standard fire assay with AA technique (Au-AA-23) on a 30-gram subsample. Standards and blanks were systematically inserted into the sample shipments as part of the sampling protocol. For samples returning greater than ten g/t gold, follow-up analysis using fire assay with a gravimetric finish is completed. For specific mineralized zones where the proportion of pyrite is high, samples were assayed using a screening analytic method on a 1000 g subsample. Following receipt of assays, visual analysis of mineralized intercepts is conducted, and additional analyses may be requested to ensure the accurate representation of the mineralized zones.

### ***About Zone 75:***

Zone 75 was discovered in 1987 by Melkior's predecessor Les Mines Messeguy Inc. with discovery drill hole number ML-87-75, which intersected 0.127 oz/t (4.35 g/t) gold over 69 feet (20.98 metres). Zone 75 coincides with a north-south striking magnetic axis and dips to the west between 65 to 80 degrees. The mineralization found at Zone 75 consists of auriferous pyrite grains disseminated in a granitic intrusive subject to alteration and remains open a depth.

### ***About the Launay Gold Project:***

The Launay Gold Project hosts near-surface mineralization along a three kilometre trend, which includes Zone 75 and the Principal Zone. The Project is located in the Abitibi Greenstone Belt and is approximately 70 kilometres northeast of Rouyn-Noranda, 80 kilometres northwest of the town of Val D'Or, Quebec and is easily accessible using highway 111 between Amos and LaSarre. Both rail and power are readily available. The property consists of 83 claims covering 63 square-kilometres.

This press release was prepared by Dr. Eric Hebert, PGeo, of GeoVector Management Inc., qualified person under Regulation 43-101. Dr. Hebert has supervised the diamond drill program, logged the core, designed the sampling program and reviewed the quality control information.

### ***About Beaufield:***

Beaufield is a mineral exploration company with its exploration activity focused in Quebec. Beaufield is well positioned to advance its portfolio of exploration properties and identify other potential opportunities in the mineral exploration or development stage.

The information set forth in this press release includes certain forward-looking statements. Such statements are based on assumptions exposed to major risks and uncertainties. Although Beaufield deems the expectations reflected in these forward-looking statements to be reasonable, the Company cannot provide any guarantee as to the materialization of the expectations reflected in these forward-looking statements. The Company expressly disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as required by

applicable law.

***Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) has reviewed or accepts responsibility for the adequacy or accuracy of this Release.***
