

Las Vegas, Nevada (FSCwire) - [Lithium Corp.](#) [OTCQB:LTUM] is pleased to announce that it has received all final sample results from its generative program conducted in Nevada and California during late winter 2015.

Thirteen discrete basins were visited during this program, seven of which the company had little or no previous data. In all 104 sediment samples, and 46 brine samples were taken. Not all basins visited yielded brines, as the ground water table in several basins was lower than could be practically sampled utilizing hand tools. The sediment sampling portion of the program indicated that a previously sparsely sampled basin exhibits widespread lithium in clays. Twelve additional samples were taken here with lithium in clay ranging from 178 ppm to 503 ppm, with the average lithium content of these samples being 350.66 ppm Li. Brine samples returned values from less than detection limit (0.02 mg/L Li) all the way up to 341.8 mg/L which sample was taken in old evaporation trenches on a playa not previously sampled. On another playa 4 samples averaged 29.75 mg/L Li, with a low value of 15.18 mg/L, and a high of 69.7 mg/L.

The Company intends to further evaluate these results, and determine whether there would be any merit in acquiring claims in these areas.

About Lithium Corporation

[Lithium Corp.](#) is an exploration company based in Nevada devoted to the exploration for new battery related resources throughout North America, looking to capitalize on opportunities within the ever expanding Lithium-Ion and next generation battery markets. The Company maintains a strategic alliance with Altura Mining, an ASX listed coal producer that has recently approved the divestiture of its Mt. Weber iron asset, and the spin-off of its coal assets into a Singapore listed company; Altura is also searching for off-take contracts for its 100% owned world-class Pilgangoora lithium pegmatite property in Western Australia.

Notice Regarding Forward-Looking Statements

This current report contains "forward-looking statements," as that term is defined in Section 27A of the United States Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. Statements in this press release which are not purely historical are forward-looking statements and include any statements regarding beliefs, plans, expectations or intentions regarding the future.

Actual results could differ from those projected in any forward-looking statements due to numerous factors. Such factors include, among others, the inherent uncertainties associated with mineral exploration and difficulties associated with obtaining financing on acceptable terms. We are not in control of minerals prices and these could vary to make development uneconomic. These forward-looking statements are made as of the date of this news release, and we assume no obligation to update the forward-looking statements, or to update the reasons why actual results could differ from those projected in the forward-looking statements. Although we believe that the beliefs, plans, expectations and intentions contained in this press release are reasonable, there can be no assurance that such beliefs, plans, expectations or intentions will prove to be accurate. Investors should consult all of the information set forth herein and should also refer to the risk factors disclosure outlined in our most recent annual report for our last fiscal year, our quarterly reports, and other periodic reports filed from time-to-time with the Securities and Exchange Commission.
