

MONTREAL, QUEBEC--(Marketwired - Jun 8, 2016) - [Beaufield Resources Inc.](#) ("Beaufield") (TSX VENTURE:BFD) is pleased to announce that they have mobilized a diamond drill to its 100% owned, 12,915 hectares, Urban property to undertake an initial summer drill program. Beaufield is planning exploration to evaluate its Urban holdings in detail.

The drilling will first focus on a series of targets on the Macho block, including the Lucky 7 zone where In December 2015, Beaufield announced results from a fall drill program, where drill hole BU-15-07 intersected 7.86 g/t gold over 6 metres near surface (news release, December 8th, 2015). The hole was drilled to test a 1,400 metre long strong induced polarization (IP) anomaly identified earlier in the year, where surface sampling had assayed 20.0 g/t gold, 54.9 g/t silver and 2.43% copper in a grab sample (news release, August 1st, 2014). Four drill holes in this area are designed to test the potential extensions of the mineralization laterally and at depth. Other targets include untested geophysical targets located in areas of favorable geology.

On the Rouleau block, drilling will concentrate on geophysical targets and potential extensions of mineralization identified at surface. Drilling will target previously untested strong induced polarization anomalies located in the southern portion of the block, some of which are associated with known gold and copper mineralized structures.

A second phase drill program is planned to begin in August on the Zone 18 gold area. Geologica Groupe-Conseil Inc. "Geologica", an independent Val d'Or based consulting firm, was commissioned in April to provide a comprehensive compilation and evaluation study of the Rouleau gold deposit (Zone 18) and the surrounding gold zones on its Urban property. Zone 18 and adjoining Zones 17 and 14 were discovered in the 1980s. The study by Geologica will outline a detailed program to evaluate the gold potential of these zones and will plan of a follow-up drill program.

Beaufield's flagship Urban property is centrally located within the Urban-Barry gold camp, near infrastructure and is easily accessible by road. The Urban-Barry area is one of the most active gold exploration camps in Quebec with many companies operating in the area including Oban Mining, Bonterra Resources, Urbana Corporation and Metanor Resources.

Please refer to Beaufield's website for a map indicating the principal stakeholders for the Urban-Barry region.

Qualified Person

This news release has been prepared by Mathieu Stephens, P.Geo., Vice President of Exploration and Corporate Development for Beaufield, the Qualified Person, as defined by National Instrument 43-101.

About Beaufield:

Beaufield is a well financed mineral exploration company with its exploration activity focused in Quebec. Beaufield is well positioned to advance its portfolio of exploration properties. The Corporation is actively exploring, well financed with approximately \$3 million in cash, has no debt and has excess work credits on its properties.

The information set forth in this press release includes certain forward-looking statements. Such statements are based on assumptions exposed to major risks and uncertainties. Although Beaufield deems the expectations reflected in these forward-looking statements to be reasonable, the Corporation cannot provide any guarantee as to the materialization of the expectations reflected in these forward-looking statements. The Corporation expressly disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as required by applicable law.

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) has reviewed or accepts responsibility for the adequacy or accuracy of this Release.
