

King's Bay Completes VTEM Plus Survey over Lynx Lake Copper-Cobalt Project, Southern Labrador

05.04.2017 | [FSCwire](#)

Vancouver - King's Bay Gold Corporation (TSX.V: KBG), (FSE: KGB1), operating as King's Bay, a mining exploration and development company based in Vancouver Canada is pleased to announce that Geotech Ltd., of Aurora, Ontario has completed 100% of the 382 line kilometer helicopter-borne Versatile Time Domain Electromagnetic Geophysical Survey over King's Bay 100% owned Lynx Lake Copper-Cobalt Project in southeastern Labrador.

Geotech Ltd. has advised King's Bay that it expects to have the results outlining potential drilling targets from the survey by early May. The helicopter-borne Versatile Time Domain Electromagnetic System (VTEM) has a penetration depth of over 800 m, with a low Base Frequency (30Hz) for penetration through conductive overburden cover, coupled with a 2-3 meters High Spatial Resolution. This system is advertised to be able to delineate potential drill hole targets from the airborne results. In addition, it also has excellent resistivity discrimination to enable the detection of weak anomalies.

Kevin Bottomley states: King's Bay is pleased to announce the completion of our VTEM survey. We look forward to viewing the geophysical data that we have gathered, and are excited to advance our project at Lynx Lake, and share that data with our shareholders.

Lynx Lake Project

The Lynx Lake Copper-Cobalt Property consists of 959 mineral claims encompassing a land area of approximately 240 square kilometers, located 100 kilometers southeast of Happy Valley Goose Bay, Newfoundland and Labrador. Historic grab sampling on the property has returned samples assaying up to 1.39% Cu, 0.94% Co, 0.21% Ni and 6.5g/t Ag. Government regional low resolution residual magnetic surveys and preliminary handheld electromagnetic surveys done by local prospectors have shown strong conductors beneath the overburden, and provide incentive to explore the area further for additional subsurface mineralization. The Project is located directly adjacent to a 3 phase powerline and the Trans-Labrador Highway.

About King's Bay

King's Bay is focused on the exploration of cobalt and other high tech metals in North America. The Company believes in this emerging fast growth sector and will continue to seek out and evaluate properties that show promise for development. King's Bay Gold Corp is operating as King's Bay.

On Behalf of the Board

Kevin Bottomley CEO, President

Forward Looking Statements

Statements in this news release that are not historical are forward looking statements. Forward looking statements in this news release include: that we will be able to identify targets suitable for further geological investigation, that VTEM surveys will be completed by midApril, 2017 and that we will be able to delineate weak target areas. Factors which may delay or prevent these forwardlooking statements from being realized include misinterpretation of data, limitations of VTEM to discern targets with high accuracy, we may not be able to get equipment or labor as we need it¼ we may not be able to raise sufficient funds to complete our intended exploration or carry on operations¼ that weather, logistical problems or hazards may delay our work or prevent us from exploration¼ that equipment may not work as well as expected¼ that analysis of data may not be possible accurately and at depth¼ and that despite encouraging data there may be no commercially exploitable mineralization on our properties. Except as required by law, the Company assumes no obligation to update forwardlooking information should circumstances or management's estimates or opinions change.
