Tasca Options Handcamp Property in Newfoundland, Canada

05.09.2018 | FSCwire

Vancouver, British Columbia (FSCwire) - Tasca Resources Ltd. ("Tasca" or the "Company") (TSX.V: TAC, FSE: 3TA) is announce the acquisition of the 2,100 hectare Handcamp property from Arm’s Length vendors. The Handcamp has been explored for base metals since the 1960’s and has only recently been recognized for its gold potentia diamond drilling program in 2010 returned highlight gold values of 6.3 g/t Au over 1.9m and 10.8 g/t Au over 0.9m withi zone of 3.1 g/t Au over 5.9m or 1.2 g/t Au over 20.9m in Hole 004; 1.53 g/t Au over 12.6m in Hole 005; and 5.5 g/t Au o within a wider interval of 3.5 g/t Au over 3.5m or 1.0 g/t over 17.8m in Hole 012. True width is estimated at 75% and full protocols were instituted. Eleven of the 12 holes were drilled in three fences spaced 250 to 300 metres apart, while hol drilled to test the area of a 31 g/t Au float sample approximately 550 metres to the southwest of hole 004. Plus 1 g/t Au intersections over 0.60m to 1.00m were recorded in all but two of the remaining 9 holes. Tasca cautions investors the C has not yet verified the historical data.

President Clive Massey states, "Tasca continues to believe in the exceptional exploration potential of Newfoundland ar pleased with this opportunity to acquire the option on the Handcamp property. The intersection of plus 1 gram gold inte of 12 holes drilled over a strike length of 850 metres in 2010 strongly suggests a robust gold system occurs at Handcar plans an aggressive exploration program once the technical team has reviewed and compiled the historic data set.&#8

The road accessible Handcamp property is comprised of 5 licenses totalling 84 claims and lies 15 kilometres south of t village of South Brook or 115 kilometres east of Deer Lake. Handcamp lies in the Dunnage Zone, a series of Cambrian mid-Ordovician island arc and back arc ophiolite and marine volcanic- sedimentary sequences. The claims are underla Ordovician Roberts Arm Group submarine volcanic and volcanogenic sedimentary rocks. The gold mineralization appe related to felsic volcanic and volcaniclastic rocks accompanied by abundant red and ferruginous chert in zones up to 5C wide.

Soil geochemistry, rock geochemistry, mechanical trenching and Induced Polarization geophysical surveys are include historical database and need to be compiled and analyzed to direct the next phase of drilling at Handcamp.

Under the terms of the Option Agreement, Tasca will make cash payments of $40,000, issue 4,250,000 shares and co $2,400,000 in exploration expenditures over the next four years. The Vendors will retain a 2% Net Smelter Return Roya will have the option to purchase 50% of this royalty for $1,000,000 at any time. The Agreement is subject to approval b Venture Exchange (the “Exchange”).

About Tasca Resources

Tasca Resources Ltd. (TAC: TSX-V) is a Canadian-based mineral exploration company focused on the acquisition, exploration and development of mineral properties. Our objective is to build shareholder value through exploration and development or acquisition of existing projects with significant up-side.
