

Hudson Resources Provides Update on the Process Plant Ramp Up at the White Mountain Anorthosite Mine

24.04.2019 | [GlobeNewswire](#)

VANCOUVER, April 24, 2019 - [Hudson Resources Inc.](#) ("Hudson" and "TSX Venture Exchange HUD") is pleased to announce that the White Mountain process plant ramp up has achieved 50% capacity and production continues to increase. The plant is producing a minus 250 micron calcium aluminum silicate product called GreenSpar. The initial customers will be using this material as a feedstock for the production of E-Glass fiberglass. It is also the feed material that Hudson will micronize to produce GreenSpar15 for the paints, coatings and plastic markets.

As previously announced, the company has had several challenges in the production ramp up, which are now well on their way to being resolved. The secondary High Pressure Grinding Roll (HPGR) is limited in capacity to approximately 70% while the company awaits the new gear boxes and ancillary parts. The delivery of these parts has been delayed by approximately one month, but they are expected to arrive on site in mid-May. These parts will be installed when the first ship comes in and the plant is shut down for 3-5 days during loading.

The Company encountered some production issues associated with extremely cold temperatures in February and March when fine particles were sticking together limiting the effectiveness of the magnetic separators. The Company has identified a solution and will install a heater system this summer to manage this issue for next winter. The weather in Greenland has since warmed up significantly and cold temperature is currently not an issue for plant operations.

Jim Cambon, President, commented: "We continue to make very good progress ramping up production at the process plant. We have been very careful to ensure that only high-quality material goes in to the product warehouse. At the current operating parameters, we are on track to meet our shipment targets for this year, but we continue to push the plant capacity. We anticipate that we will have our first shipment of GreenSpar ready for loading by the end of June".

Hudson, through Hudson Greenland A/S, owns 100% of the White Mountain Anorthosite mine in Greenland. The calcium feldspar mine is permitted for 50 years. Photos of the project can be found at <https://hudsonresourcesinc.com/gallery/>.

ON BEHALF OF THE BOARD OF DIRECTORS

"Jim K Cambon"
President and Director
