The Hughes Tonopah property features the eastern portion of the famous past-producing Tonopah mining district. Available historical data show the property contains dozens of mineralized zones consisting of epithermal quartz-calcite veins, stockworks and breccias hosted in intermediate and felsic volcanic rocks. The most significant past-producer on the property is the Belmont Mine which is reported to have produced 36.7 million ounces of silver and 428,000 ounces of gold at a silver equivalent grade of approximately 36.46 oz/t (1,250 g/t) Ag. Since mining ceased in 1929 very little modern exploration or assessment of remaining potential has been completed.

[Lithium Corp.](#) is complying with all governmental restrictions and suggestions with respect to endeavoring to limit the spread of the Corona Virus, and has restricted all but the most essential of travel at this point. However it is business as usual for the Company, and we remain committed to working through this difficult and trying period as best we can.
