

Gowest Gold: Latest Drilling Continues to Intercept Gold Mineralization Beyond Identified Bradshaw Deposit

01.06.2020 | [GlobeNewswire](#)

TORONTO, June 01, 2020 - [Gowest Gold Ltd.](#) ("Gowest" or the "Corporation") (TSX VENTURE:GWA) is pleased to announce assay results from the recently completed spring core drill program at its 100% owned Bradshaw Gold Deposit ("Bradshaw") within the Company's North Timmins Gold Project ("NTGP"). This latest surface drilling program was designed to assist in the development of Bradshaw's mineable resource, and more specifically focused on the location of the vent raise, the secondary egress necessary for the production phase of the mine and on the crown pillar assessment prior to continuing the expansion of the Advanced Exploration Bulk Sample program.

Highlights:

Successfully extended gold horizons to subsurface

Best intercepts include:

- 2.2 m of 12.24 grams per tonne (g/t) gold intersected in hole BGMGT-01
 - Including 0.7m grading 33.9 g/t gold
- 2.5 m of 1.89 g/t gold also in hole BGMGT-03
 - Including 0.5 m grading 4.36 g/t gold

"We are pleased to be able to report that we are continuing to advance the development of Bradshaw, and to provide the results from the recent drilling at the deposit," said Greg Romain, Gowest's President and CEO. "In addition to the significant technical information that we have received, we can reconfirm our belief that the deposit extends beyond the currently defined outline in a new area adjacent to the existing underground infrastructure. This clearly underlines the potential to add additional ounces to our resources and reserves at the project."

Technical Review:

This latest program included six diamond drill holes, which were completed for 330 metres (m) of surface drilling (see Figure 1 below.) Three of the holes were drilled near the mine development infrastructure to assess the crown pillar, which provides the primary support for the top of the mine. The other three holes were drilled to the north of the deposit to gather information in preparation for developing the first leg of the ventilation raise and the secondary egress for the mine (see *Gowest news release dated May 6, 2020*.)

Two of these first three holes intersected mineralization supporting continuity of gold mineralization above the 30m Level. The gold mineralization in hole BGMGT-01 represents the up-dip extension of the north ore zone developed on the 30, 45, and 60m Levels. BGMGT-03 intersected part of a southern ore zone developed on 30 and 45m Levels.

The ventilation and egress drill holes, which were located in the adjacent mafic volcanic package to the immediate northwest of the Bradshaw deposit and in the existing ramp development area, intersected lower grade gold mineralization. At approximately 17.5m and 34.5m downhole Pilot-hole1 intersected short intervals of 2.83g/t Au and 2.70g/t Au, respectively. Pilot-hole3 intersected 0.4m at 4.02g/t approximately 14.5m downhole.

Continued step-out drilling is planned to extend the known gold zones deeper within the deposit and to

further test targets where new and historic drilling (see Gowest news release dated June 27, 2019) has intercepted gold mineralization near and to the northwest of the Bradshaw deposit.

Table 1. Gold intersections

Hole	From (m)	To (m)	Length	Au (g/t)
BGMGT-01	17.7	19.9	2.2	12.24
Including	17.7	18.4	0.7	33.90
BGMGT-03	20.5	23.0	2.5	1.89
Including	22.5	23.0	0.5	4.36
Pilot-hole1	17.3	17.8	0.5	2.83
Pilot-hole3	14.5	14.9	0.4	4.02

The above intervals reflect downhole lengths of the mineralization. Reported gold values are uncapped. The drill results were received from Activation Laboratory (Actlabs,) an independent laboratory in Timmins, Ontario.

BGMGT-02 was not sampled, and Pilot-hole 2 had no significant mineralization.

Table 2. Hole location and direction

Hole Name	Easting	Northing	Level	Length	Collar Dip	Collar Azimuth
Pilot-hole1	486,815	5,398,755	289.8	60	-90	0
Pilot-hole2	486,800	5,398,755	289.8	120	-90	0
Pilot-hole3	486,813	5,398,744	289.8	60	-90	0
BGMGT-01	486,960	5,398,680	290.2	30	-90	0
BGMGT-02	487,012	5,398,667	289.7	30	-90	0
BGMGT-03	486,968	5,398,645	290.1	30	-90	0

About Gowest

Gowest is a Canadian gold exploration and development company focused on the delineation and development of its 100% owned Bradshaw Gold Deposit (Bradshaw), on the Frankfield Property, part of the Company's North Timmins Gold Project (NTGP). Gowest is exploring additional gold targets on its +100 square kilometre NTGP land package and continues to evaluate the area, which is part of the prolific Timmins, Ontario gold camp. Currently, Bradshaw contains a National Instrument 43-101 Indicated Resource estimated at 2.1 million tonnes ("t") grading 6.19 grams per tonne gold (g/t Au) containing 422 thousand ounces (oz) Au and an Inferred Resource of 3.6 million t grading 6.47 g/t Au containing 755 thousand oz Au. Further, based on the Pre-Feasibility Study produced by Stantec Mining and announced on June 9, 2015, Bradshaw contains Mineral Reserves (Mineral Resources are inclusive of Mineral Reserves) in the probable category, using a 3 g/t Au cut-off and utilizing a gold price of US\$1,200 / oz, totalling 1.8 million t grading 4.82 g/t Au for 277 thousand oz Au.

Qualified Person

The technical information in this news release has been reviewed and approved by Yungang Wu, P.Geo.,

Gowest's Senior Geologist, who is the Qualified Person for the technical information in this news release under National Instrument 43-101 standards.
