

Colibri Resource Option Partner Tocvan Ventures Reports Gold Recovery of 92% from Pilar and Provides Update on Drilling Progress

04.05.2021 | [Newsfile](#)

Dieppe, May 4, 2021 - [Colibri Resource Corp.](#) (TSXV: CBI) ("Colibri" or the "Company") is pleased to announce that [Tocvan Ventures Corp.](#) ("Tocvan") has reported to the Company the results of preliminary metallurgical testing from the Pilar Gold Project ("Pilar") which includes gold recoveries of 91.6% and 90.6% from two composite samples collected from drill hole JES-20-32.

Hole JES-20-32, which was drilled by Tocvan in December 2020 in the central portion of the Main Zone at Pilar, intersected 1.6 grams per tonnes (g/t) Au over an intersection length of 94.6 metres ("m") including a high-grade interval of 10.8 g/t Au and 38 g/t Ag over an intersection length of 9.2 m. Two composite samples were completed from the hole grading 1.15 g/t Au and 0.63 g/t Au. Cyanide bottle roll tests were completed at SGS Laboratories in Durango, Mexico. The results indicate that at a retention time of 48 hours, maximum dissolution can be reached of 91% for the lower grade composite and 92% for the higher grade composite (see table below)

Tocvan also reports that it has completed 1,394 m in 8 holes of a planned 2,400 metres drill program at Pilar. Drilling to date has focused on extension of the Main Zone. Drilling in the current campaign will also test new targets in the 4-Trench Extension, North-Hill and Triple Vein Zone areas. A second stage of drilling totalling 1,600 meters is planned to commence mid-May which will continue to test property wide targets and follow-up on results from the initial stage.

Tocvan Ventures is in year two of a five-year option agreement with Colibri to earn an initial 51% ownership of the Pilar Gold-Silver Project. For full details of the agreement see Colibri's news release dated September 24th, 2019.

ABOUT THE PILAR PROPERTY:

The Pilar Gold-Silver property is interpreted as a structurally controlled low-sulphidation epithermal project hosted in andesite rocks. Three zones of mineralization have been identified in the north-west part of the property from historic surface work and drilling and are referred to as the Main Zone, North Hill and 4-Trench. Structural features and zones of mineralization within the structures follow an overall NW-SE trend of mineralization. Over 19,200 m of drilling have been completed to date. Significant results are highlighted below:

- 2020 Phase I RC Drilling Highlights include (all lengths are drilled thicknesses):
 - 94.6m @ 1.6 g/t Au, including 1.5 m @ 9.2m @ 10.8 g/t Au and 38 g/t Ag;
 - 41.2m @ 1.1 g/t Au, including 3.1m @ 6.0g/t Au and 12 g/t Ag ;
 - 24.4m @ 2.5 g/t Au and 73 g/t Ag, including 1.5m @ 33.4 g/t Au and 1,090 g/t Ag
- 17,700m of Historic Core & RC drilling. Highlights include:
 - 61.0m @ 0.8 g/t Au
 - 16.5m @ 53.5g/t Au and 53 g/t Ag
 - 13.0m @ 9.6 g/t Au
 - 9.0m @ 10.2 g/t Au and 46 g/t Ag

ABOUT COLIBRI RESOURCE CORPORATION:

Colibri is a Canadian-based mineral exploration company listed on the TSX-V (CBI) and is focused on acquiring and exploring prospective gold & silver properties in Mexico. The Company has six exploration projects of which five currently have exploration programs being executed or planned for 2021. The flagship Evelyn Gold Project is 100% owned and explored by Colibri. The Company has four additional projects, Pilar Gold & Silver Project (optioned to Tocvan Ventures (CSE:TOC), El Mezquite Gold & Silver Project, Jackie Gold & Silver Project, and the Diamante Gold & Silver Project (earn-in agreements with Silver Spruce Resources (TSXV: SSE) are also currently being actively advanced.

For more information about all Company projects please visit: www.colibriresource.com.
