Video Discusses Kesselrun Resources' Additional Drill Results on its Huronian Gold Project in Ontario

17.02.2022 | GlobeNewswire

VANCOUVER, Feb. 17, 2022 - Kesselrun Resources (TSXV:KES) (OTCPink:KSSRF) (FSE:CMG), a Thunder Bay, Ontario-based mineral exploration company, has released additional drill results on its Huronian Gold Project. The 100% owned Huronian Project, located 100 kilometres west of Thunder Bay in a region of numerous multimillion-ounce development and advanced exploration projects, is one of two company properties, the other being its 100% owned Bluffpoint Project.

A Media Snippet accompanying this announcement is available by clicking on the image or link below:

Continued drilling and modeling of the Fisher zone has identified multiple new, high-grade zones in both the footwall and hanging wall sides of the Fisher zone, all in close proximity. Highlights include hole 21HUR130, which intercepted 8.4 g/t gold over 4.7 metres, including 33.9 g/t gold over 1.0 metre in the newly named Fisher FW-A Zone, and hole 21HUR108, which intercepted 24.3 g/t gold over 0.5 metres in the newly named Fisher HW-B Zone.

Ongoing modelling incorporating drill results from both Kesselrun and previous operators has interpreted multiple new zones in both the hangingwall and footwall to the Fisher Zone. These zones vary in thickness from 0.5 to 10 metres wide and are currently outlined up to 200 metres along strike. The recognition of these new zones points to the tremendous potential that remains in the area in and around the historic Huronian mine

Numerous historic drill intercepts and surface expressions of gold mineralization have yet to be incorporated into modelled zones.

The Huronian Gold Project hosts the past producing Huronian Mine, Northwestern Ontario's first gold mine with an historic resource estimate of 44,592 oz gold at an average grade of 15.3 g/t gold in the indicated category, and 501,377 oz gold at an average grade of 14.4 g/t gold in the inferred category.

The resource was estimated by Minescape Exploration Inc. in 1998 and is historic in nature and is presented only for reference purposes as additional work is required to confirm the numbers. The Huronian Gold Project hosts the same lithological package of rocks, as interpreted from both Government of Ontario and Kesselrun Resources mapping, compilation and modelling.

It is on strike from Wesdome Gold's adjacent Moss Lake Gold Deposit which has a resource estimate of 1,377,300 oz gold at an average grade of 1.1 g/t gold in the indicated category and 1,751,600 oz gold at an average grade of 1.1 g/t gold in the inferred category, as outlined in their 2013 PEA. Again, management cautions that mineralization hosted on nearby properties is not necessarily indicative of mineralization hosted on Kesselrun Resources' property.

The 2021 Huronian drill program consisted of approximately 19,750 metres with results from the remaining 750 metres still to come. The 2022 Huronian exploration program will consist of drilling as well as geophysics over selected target areas. Drilling will be targeting the Fisher, Fisher North, McKellar and Huronian zones, all in close proximity along an approximate 1500 metre strike length in the area of the historic Huronian Mine.

The geology on strike to the southwest of Goldshore Resources' Moss Lake deposit will also be targeted.

The shares are trading at \$0.095.
