

# Satellite Imagery Initiated Over Arbor Metals Jarnet Lithium Property in James Bay, Quebec

17.04.2023 | [GlobeNewswire](#)

VANCOUVER, April 17, 2023 - [Arbor Metals Corp.](#) (the "Company" or "Arbor") (TSXV: ABR, FWB: 432) announces that it has initiated DIRT Exploration of Cape Town, South Africa, to carry out a long-wave infrared survey ("LWIR") and interpretation of high-resolution satellite imagery over the four blocks comprising the Company's Jarnet Lithium Project and surrounding area in the James Bay region of Quebec. The Jarnet Lithium Project covers approximately 3,759 hectares and comprises 70 map-designated claims.

Located less than two km northwest of [Patriot Battery Metals Inc.](#)'s ("PMET") CV-5 pegmatite target, the Jarnet South block is the subject of Arbor's ongoing exploration efforts. PMET recently reported (PMET news release, March 29th, 2023) a high-grade extension (Nova Zone) of the CV 5 target of 87.7 metres averaging 3.13 per cent Li<sub>2</sub>O (lithium oxide), including 19.8 metres of 5.28 per cent Li<sub>2</sub>O.

LWIR analysis has the ability to map or identify mineral distribution over extensive areas covered by foliage and shallow cover through reflectance spectroscopy against a set of known standards and proprietary processing of satellite data. The LWIR analysis can view mineral spectra to shallow depths, thanks to its ground-penetrating nature, utilizing the long-wave bands of infrared radiation. This survey, together with satellite imagery analysis, will incorporate data and known pegmatite occurrences that have been identified from the Company's 2022 reconnaissance-scale field program.

Arbor is currently compiling existing assessment and regional data on the four Jarnet claim blocks and surrounding properties. While some of the neighbouring properties have received limited attention on lithium mineralization, there is available geological and geophysical assessment data relating to exploration for base (Cu, Zn, Pb) and precious (Au, Ag) metal targets. The Jarnet South Block has southern and eastern boundaries contiguous with PMET Corvette Property, while the North Block is contiguous to PMET's Corvette Property on the southwest boundary.

The DIRT interpretive report and the Company's compilation will be used to refine proposed exploration targets on the Jarnet Project for the 2023 field season.

*Note: The Company cautions the discoveries and observations on properties in proximity to the Company's properties are not necessarily indicative of the presence of similar mineralization or geology on the company's properties.*

Dr. Peter Born, P.Geo., is the designated qualified person as defined by *National Instrument 43-101* and is responsible for and has approved the technical information in this release.

About Arbor Metals Corp.

[Arbor Metals Corp.](#) is a mining exploration company that focuses on developing high-value mineral projects of geographic significance across the globe. As a leader in the industry, the company is dedicated to advancing mineral exploration and overseeing world-class mining projects. Arbor is confident that quality projects, proven strategies, and a professional team will lead to exceptional outcomes. Currently, the company holds three exceptional mineral projects.

One of these mineral projects is the Jarnet Lithium Project, which is located in the James Bay region of Quebec and is comprised of 47 map-designated claims that cover an approximate area of 3,759 hectares.

The Jarnet Project is contiguous to the Corvette-FCI property, where diamond drilling has confirmed significant lithium mineralization and represents one of the most high-profile lithium exploration projects in the sector.

For more information, interested parties may contact Mark Ferguson, Chief Executive Officer, by sending an email to [info@arbormetals.com](mailto:info@arbormetals.com) or by visiting the company's website at [www.arbormetalscorp.com](http://www.arbormetalscorp.com).

On behalf of the Board,

[Arbor Metals Corp.](#)

Mark Ferguson, Chief Executive Officer
