Each FT Unit and Charity FT Unit will consist of one common share of the Company to be issued as a "flow-through share" within the meaning of the Income Tax Act (Canada) (each, a "FT Share") and one half of one Warrant. Each whole Warrant shall entitle the holder to purchase one common share of the Company (each, a "Warrant Share") at a price of C\$0.60 at any time on or before that date which is 24 months after the closing date of the Offering.

Such proceeds will be renounced to the subscribers with an effective date not later than December 31, 2023, in the aggregate amount of not less than the total amount of gross proceeds raised from the issue of FT Shares.

The common shares of the Company issuable from the sale of these LIFE Units are expected to be immediately freely tradeable under applicable Canadian securities legislation if sold to purchasers resident in Canada.

All Offered Securities excluding the LIFE Units will be offered by way of the "accredited investor" and minimum amount investment" exemptions under NI 45-106 in all of the provinces of Canada. The common shares of the Company issuable from the sale of these Offered Securities will be subject to a restricted period in Canada ending on the date that is four months plus one day following the closing of the Offering as defined in Subsection 2.5(2) of Multilateral Instrument 45-102 - Resale of Securities.

The Company intends to use the proceeds raised from the Offering for exploration of the Company's projects in the Athabasca Basin and for general working capital purposes. The Offering is scheduled to close on or around October 16, 2023 and is subject to certain conditions including, but not limited to, receipt of all necessary approvals including the approval of the TSX Venture Exchange.

There is an offering document related to the Offering that can be accessed under the Company's profile at www.sedarplus.ca and on the Company's website at www.baselode.com. Prospective investors should read this offering document before making an investment decision.

About Baselode Energy Corp.

Baselode controls 100% of approximately 264,172 hectares for exploration in the Athabasca Basin area, northern Saskatchewan, Canada. The land package is free of any option agreements or underlying royalties.

The Company discovered the ACKIO near-surface, high-grade uranium deposit in September 2021. ACKIO measures greater than 375 m along strike, greater than 150 m wide, comprised of at least 11 separate zones, with mineralization starting as shallow as 28 m beneath the surface and down to approximately 300 m depth beneath the surface with the bulk of mineralization occurring in the upper 120 m. ACKIO remains open to the west, north, south, and along the Athabasca sandstone unconformity to the east and south.

Baselode's Athabasca 2.0 exploration thesis focuses on discovering near-surface, basement-hosted, high-grade uranium orebodies outside the Athabasca Basin. The exploration thesis is further complemented by the Company's preferred use of innovative and well-understood geophysical methods to map deep structural controls to identify shallow targets for diamond drilling.
