

Adroit Resources Inc. Drill Programme Complete on the Western End of High-Grade Copper-Gold Vein, Little Pigeon Lake

14.03.2012 | [Marketwire](#)

VANCOUVER, BRITISH COLUMBIA -- (Marketwire) -- 03/14/12 -- [Adroit Resources Inc.](#) (TSX VENTURE: ADT) (FRANKFURT: A7V) (BERLIN: A7V). Drill programme complete on the western end of high-grade copper-gold vein, Little Pigeon Lake.

The Little Pigeon Lake project is located in the south-eastern part of the Company's Red Vein property, which consists of 192 claim units for a total area of 3,072 hectares. The project is located in Natal Township, south of Timmins.

Management is pleased to announce that Forage Perfection Inc. (Notre-Dame-du-Nord, Quebec) has completed an 1,818 metre drill programme in three holes testing high-conductance IP targets on its Little Pigeon Lake property (Shining Tree Mining Camp). The drill programme was announced earlier by Adroit in its February 2nd, 2012 news release. The targets selected for drilling were defined by a recent ground geophysical survey undertaken by Larder Geophysics Ltd. (Larder Lake, Ontario.) and ongoing prospecting and geological mapping by Adroit. The targets included discrete chargeability anomalies in the immediate vicinity of an extensive high-grade copper-gold quartz vein and a large chargeability anomaly that underpins the vein at depth. This quartz vein occurs over a strike length of 6.25 kilometres on the Little Pigeon Lake property and has had numerous chalcopryrite-mineralized localities mapped along it by the Ontario Geological Survey. Currently, the drill core is being logged and sampled at the Adroit core storage and preparation facility in Cobalt, Ontario. Results of assays will be announced in a subsequent news release.

President Graeme Rowland said: "We are pleased to announce the completion of our drill programme designed to test IP anomalies associated with our high-grade copper-gold vein on the Little Pigeon Lake property. With this programme we will begin to understand the geological setting of the vein that we believe has similar characteristics to those exhibited by the Hollinger-MacIntyre-Coniorum Complex at Timmins. It is our intention to progressively assess the entire 6.25km strike-length of this vein by undertaking geological, geophysical and geochemical surveys which, when integrated, will define drill targets."

The project is part of the Company's Red Vein Property and is situated in the heart of a highly productive mining triangle between the established centers of Timmins, Sudbury and Kirkland Lake, where more than 170 million ounces of gold and 200 million tons of base metals have been mined. Subsequent to data compilation and integration, significant exploration targets have been identified on the project.

The Red Vein property is immediately adjacent to the Timmins South property, held by SGX Resources Inc. (SXR), which has been the subject of an extensive drilling campaign since last fall, targeting near-surface gold mineralization. An assessment of the impact of this programme and the possible relationship to the Company's ground will be made once the drill results and maps are made public.

Mark Fedikow, Ph.D. P.Eng. P.Geo. C.P.G. has verified and approved the geoscientific information contained in this news release. Dr. Fedikow is a Qualified Person as defined in National Instrument 43-101 (Standards of Disclosure for Mineral Projects).

[Adroit Resources Inc.](#) is a mineral exploration company that is currently exploring for Gold, Silver and Antimony in Central Italy and diamonds, precious and base metals in the Timmins South/Shining Tree/Temagami/Cobalt and Bancroft areas of Ontario, Canada. The Company currently has 135,295,191 shares issued and outstanding.

On behalf of the Board of Directors,

Graeme Rowland
Chairman and President
