

Graphite Corp. Reviews Data Indicating Over 7M Ton Resource on Alabama Property

28.11.2012 | [Marketwire](#)

Historic Data Recommends "Aggressive Exploration" With Increased Results Anticipated

ELKO, 11/28/12 - [Graphite Corp.](#) (OTCQB: GRPH) ("[Graphite Corp.](#)" or the "Company"), an exploration stage company focused on the evaluation, acquisition and development of domestic graphite mining opportunities, is pleased to announce its initial findings from a compilation study of official records and related data that the Company's geological consulting staff have recently undertaken.

The historic data for the Company's Clay County, Alabama graphite property indicates a resource potential of 4.363 million measured tons of weathered material and 2.802 million indicated tons of un-weathered material for a total of 7.165 million tons combined.

The findings are derived from government records and other historic sources of information relating to the property based on a period of activity when a number of mines on Graphite Corp's Clay County block were engaged in ongoing exploration and production.

The data compilation was chiefly extracted from US Bureau of Mines reports during an era when access to foreign sources of graphite was cut off. In summary, 4,363,000 tons of friable, easily minable and processible weathered graphite schist was determined to exist in six of the seven deposits known to exist on the property. In addition, a further 2,802,000 tons of non-weathered graphitic schist was outlined on the property, for a total resource of over 7 million tons of mineralized material known to-date.

The results below are not currently conclusive with respect to all resources that can be reasonably expected to be found on the property as the Bureau of Mines Geologists at the time made recommendations for continued aggressive exploration at several locations on the property. It is noted that the focus of earlier exploration was totally geared only towards the weathered schist, and the Company believes it probable that the un-weathered resource could increase considerably through the application of modern exploration techniques.

Deposit	Measured Weathered				Indicated Un-Weathered	Grand Totals
	Grade A tons	Grade B tons	Grade C tons	Total tons		
Quenelda	499,000	103,000	1,009,000	1,611,000	996,000	2,607,000
CB Allen	337,000	172,000	58,000	567,000	182,000	749,000
Eagle		165,000	631,000	796,000	510,000	1,306,000
Superior	123,000	248,000	638,000	1,009,000	864,000	1,873,000
Crucible		380,000		380,000	250,000	630,000
Totals	959,000	1,068,000	2,336,000	4,363,000	2,802,000	7,165,000

Grade A: > - 15 lbs +50 mesh graphite per ton/ore >85% C
 Grade B: 10 - 15 lbs +50 mesh graphite per ton/ore >85% C
 Grade C: 5 - 10 lbs +50 mesh graphite per ton/ore >85% C

Company President Brian Goss states, "The information we are providing today is historic data and should not be considered a definitive resource assessment and the public should take this into account. However, given its provenance as US Bureau of Mines data, we feel strongly that the indicated figures are noteworthy and extremely promising. We look forward to increasing our efforts in the field in order to rapidly develop a comprehensive study aimed at validating the current data, expanding our resource assessment and to ensure acceptance by modern regulatory obligations in order to best serve our growing number of stakeholders."

Additional details of the Company's business, finances, appointments and agreements can be found as part

of the Company's continuous public disclosure as a reporting issuer under the Securities Exchange Act of 1934 filed with the Securities and Exchange Commission's ("SEC") EDGAR database.
